Summary

Computer Science Engineering undergraduate at VIT Bhopal University with strong foundations in Java, backend development, Data Structures & Algorithms, and AI-powered applications. Experienced in building scalable software using Java, Spring Boot, Node.js, REST APIs, databases, and modern development tools. Passionate about backend engineering, intelligent automation, and solving real-world problems.

Technical Skills

Languages: Java, Python, JavaScript, SQL, C++, HTML, CSS

Backend: Spring Boot, Node.js, Express.js, REST APIs, JWT Authentication

Frontend: ReactJS

Databases: MySQL, MongoDB

AI/ML: TensorFlow, Scikit-learn, CNN (MobileNetV2), NLP

Core: Data Structures, Algorithms, OOP

Tools: Git, GitHub, AWS, Agile

Education

VIT Bhopal University

B.Tech Computer Science and Engineering — CGPA: 7.95

Bhopal
2023–2027

Hill Grove Col's Academy (CBSE)

Class X: 89.6% — Class XII: 84.4%

Rajasthan
2020–2022

Projects

AI-Based Skin Disease Detection System

Full Stack AI Healthcare Application

GitHub
Python, FastAPI

- Built a CNN-based skin disease detection system using MobileNetV2 achieving around 85% validation accuracy.
- Developed backend APIs and integrated AI inference with an interactive web interface.
- Implemented image preprocessing and automated prediction workflow.

Highway Draft Power Generator

Backend Development for IoT Monitoring Platform

GitHub
Node.js, Express.js, MongoDB

- Designed and implemented the backend architecture for real-time IoT sensor management.
- Built REST APIs for data ingestion, analytics, authentication and administrative operations.
- Designed MongoDB schemas and backend services for scalable sensor data storage.
- Implemented real-time communication for live sensor updates.

Realtime Spreadsheet

Collaborative Spreadsheet Platform

GitHub (In Progress)
Java, Spring Boot

- Developing a collaborative spreadsheet platform using Java and Spring Boot.
- Implementing secure user authentication and backend APIs for spreadsheet management.
- Designing a scalable backend architecture supporting multiple users and real-time collaboration.

Achievements

Winner – Zoho Community Hackathon 2025 (IoT Category): Developed **SenseOps**, an AI-powered IoT monitoring and automation solution on the Zoho platform integrating enterprise workflow automation and intelligent monitoring.
